

DERIVATIVES WEB SERVICE

Thursday, 20 December 2012

A new query type has been implemented when using the *Derivatives Web Service* of the Spanish National Numbering Agency (ANCV). To the existing consult type by contract code, you can also make the query by underlying and expiry date. Both types of queries, with their respective example, are explained in further detail in the section *Derivatives Web Service* of the ANCV website.

The *Derivatives Web Service* is an application for consulting the database of the ANCV which is activated by a call to a specific URL and allows the user to obtain information on certain characteristics of the derivative contracts.
