TDA Ibercaja 2 Spanish RMBS Ratings Raised On Three Classes Of Notes; One Class Affirmed

March 28, 2022

Overview

- TDA Ibercaja 2 is a Spanish RMBS transaction that securitizes a pool of prime residential mortgage loans. It closed in October 2005.
- Following our review, we raised our ratings on the class B, C, and D notes. At the same time, we affirmed our rating on the class A notes.

MILAN (S&P Global Ratings) March 28, 2022--S&P Global Ratings today raised its credit ratings on TDA Ibercaja 2 Fondo de Titulizacion de Activos's class B, C, and D notes to 'AAA (sf)', 'AA+ (sf)', and 'AA (sf)' from 'AA+ (sf)', 'AA (sf)', and 'A+ (sf)', respectively. At the same time, we have affirmed our 'AAA (sf)' rating on the class A notes.

Today's rating actions follow our full analysis of the most recent information that we have received and the transaction's current structural features.

After applying our global RMBS criteria, the overall effect is a marginal increase of our expected losses due to a marginal increase of our weighted-average loss severity (WALS) assumptions, driven by higher market value declines (see "Asset Price Risks: Inflated Property Values Mean Higher Loss Assumptions In European RMBS And Covered Bonds," published on March 21, 2022). Nevertheless, the overall credit enhancement continues to increase--which drives today's upgrades--given the presence of a floored reserve fund.

Table 1

Credit Analysis Results

Rating	WAFF (%)	WALS (%)	Credit coverage (%)
AAA	8.94	2.00	0.18
AA	6.17	2.00	0.12
A	4.78	2.00	0.10
BBB	3.68	2.00	0.07
BB	2.52	2.00	0.05
B	1.71	2.00	0.03

WAFF--Weighted-average foreclosure frequency. WALS--Weighted-average loss severity.

TDA Ibercaja 2 Spanish RMBS Ratings Raised On Three Classes Of Notes; One Class Affirmed

Loan-level arrears stand at 1.3%. Overall delinquencies remain well below our Spanish RMBS index (see "Related Research").

The level of outstanding defaults (net of recoveries), defined as loans in arrears for a period equal to or greater than 18 months, represent 0.18% of the closing pool balance. The first interest deferral trigger is for class D, and it is not at risk of being breached because it is defined at 3.3%, and we do not expect that this level will be reached in the near term.

The reserve fund is at its floor value (€4.50 million) and will no longer amortize, providing further credit enhancement as the notes continue to amortize.

Our operational, counterparty, rating above the sovereign, and legal risk analyses remain unchanged, in line with our previous review. Therefore, the ratings assigned are not capped by any of these criteria.

The servicer, Ibercaja Banco S.A., has a standardized, integrated, and centralized servicing platform. It is a servicer for many Spanish RMBS transactions, and its transactions' historical performance has outperformed our Spanish RMBS index.

The class A, B, C, and D notes' credit enhancement has increased to 10.8%, 6.4%, 4.9%, and 4.0%, respectively, due to the amortization of the notes. Considering this increase, we have raised to 'AAA (sf)', 'AA+ (sf)', and 'AA (sf)', from 'AA+ (sf)', 'AA (sf)', and 'A+ (sf)', respectively, our ratings on the class B, C, and D notes. At the same time, we have affirmed our 'AAA (sf)' rating on the class A notes.

Our analysis indicates that the credit enhancement available for class A and B notes still commensurate with our 'AAA' rating. We have therefore affirmed our 'AAA (sf)' rating on the class A notes and raised to 'AAA (sf)' our ratings on the class B notes.

Under our cash flow analysis, the class C and D notes could withstand stresses at higher ratings than those currently assigned. However, we have limited our upgrades based on their overall credit enhancement, position in the waterfall, the current macroeconomic environment, and the continuation of pro rata payments with a lack of credit enhancement build-up before upcoming interest payment dates.

TDA Ibercaja 2 is a Spanish RMBS transaction that securitizes a pool of prime residential mortgage loans. It closed in October 2005.

Potential credit effects of Russia's military conflict with Ukraine

We acknowledge a high degree of uncertainty about the extent, outcome, and consequences of the military conflict between Russia and Ukraine. Irrespective of the duration of military hostilities, sanctions and related political risks are likely to remain in place for some time. The potential effects could include dislocated commodities markets (notably for oil and gas) supply chain disruptions, inflationary pressures, weaker growth, and capital market volatility. As the situation evolves, we will update our assumptions and estimates accordingly. This transaction does not have direct exposure to collateral in the conflict region. Collateral-related pressures could, therefore, only come to bear through second-round effects, such as lower economic growth and higher inflation hurting consumers' ability to service their debt. However, we don't see this as a material risk in the short term (see "S&P Global Ratings Expects The Russia-Ukraine Conflict To Have Limited Direct Impact On Global Structured Finance," published on March 3, 2022).
