PharmaMar's Zepzelca® (lurbinectedin) receives commercialization approval for the treatment of relapsed small cell lung cancer in Argentina

Madrid, May 19th, 2025.- PharmaMar (MSE:PHM) and its partner, Adium Pharma S.A, through its Argentine subsidiary Raffo, have received the conditional marketing approval for Zepzelca® (lurbinectedin) from Argentina's National Administration of Drugs, Foods and Medical Devices (ANMAT) for the treatment of adult patients with metastatic small cell lung cancer (SCLC) with disease progression on or after platinum-based chemotherapy.

This new approval of lurbinectedin is based on data from the open-label, multicenter, single-arm, monotherapy clinical trial conducted in 105 adult patients with recurrent SCLC (including patients with platinum-sensitive and platinum-resistant disease), which the Food and Drug Administration (FDA) used to grant the accelerated approval for lurbinectedin in the United States in 2020.

In March 2021, PharmaMar and Adium Pharma signed a licensing agreement for lurbinectedin in Latin America. In the region, in addition to Argentina, lurbinectedin is already available to patients in Mexico, Ecuador and Peru. After this approval, lurbinectedin is available in a total of 18 territories around the world.

Lung cancer is the third most common cancer in Argentinaⁱ. Around 10% to 15% of people with lung cancer have small cell lung cancer, one of the most aggressive and devastating solid tumors, that spreads rapidly resulting in poor prognosis. Many people are diagnosed after it has already reached other parts of the bodyⁱⁱ.

About PharmaMar

PharmaMar is a biopharmaceutical company focused on the research and development of new oncology treatments, whose mission is to improve the healthcare outcomes of patients afflicted by serious diseases with our innovative medicines. The Company is inspired by the sea, driven by science, and motivated by patients with serious diseases to improve their lives by delivering novel medicines to them. PharmaMar intends to continue to be the world leader in marine medicinal discovery, development and innovation.

PharmaMar has developed and now commercializes Yondelis® in Europe by itself, as well as Zepzelca® (lurbinectedin), in the US; and Aplidin® (plitidepsin), in Australia, with different partners. In addition, it has a pipeline of drug candidates and a robust R&D oncology program. PharmaMar has other clinical-stage programs under development for several types

of solid cancers: lurbinectedin, ecubectedin, PM534 and PM54. Headquartered in Madrid (Spain), PharmaMar has subsidiaries in Germany, France, Italy, Belgium, Austria, Switzerland and The United States. PharmaMar also wholly owns Sylentis, a company dedicated to researching therapeutic applications of gene silencing (RNAi). To learn more about PharmaMar, please visit us at www.pharmamar.com.

About Zepzelca®

Zepzelca® (lurbinectedin), also known as PM1183, is an analog of the marine compound ET-736 isolated from the sea squirt Ecteinascidia turbinata in which a hydrogen atom has been replaced by a methoxy group. It is a selective inhibitor of the oncogenic transcription programs on which many tumors are particularly dependent. Together with its effect on cancer cells, lurbinectedin inhibits oncogenic transcription in tumor-associated macrophages, downregulating the production of cytokines that are essential for the growth of the tumor. Transcriptional addiction is an acknowledged target in those diseases, many of them lacking other actionable targets.
