PRESS RELEASE

ECOENER DOUBLES ITS OPERATIONAL CAPACITY AND GENERATES OVER €42 MILLION IN REVENUE

- **"Ecoener is boosting its growth with the largest capacity increase in its history: over the past two months we have connected assets totalling 229 MW to the grid, reaching 656 MW in operation. This is almost double the installed capacity compared to the previous year. We are on our way to 1 GW in operation and under construction", explained Luis de Valdivia, Chairman of Ecoener.**
- **The revenues for the first half of the year grew by 3% and the EBITDA increased by 6% to €19.6 million.**
- **Consolidated net profit amounted to €4.33 million.**

La Coruña, 25 September. 2025.- "Ecoener is boosting its growth with the largest capacity increase in its history: over the past two months we have connected assets totalling 229 MW to the grid, reaching 656 MW in operation. This is almost double the installed capacity compared to the previous year. We have invested €79 million in the first six months of the year to advance our plans", explained Luis de Valdivia, Chairman of Ecoener, during the presentation of results for the first half of 2025.

"In total, the company has 815 MW in operation and under construction and we are on our way to achieve the goal of 1 GW. We are entering a new stage for Ecoener, with greater installed capacity, more robust international diversification and, consequently, a significant boost to future results and profitability," said Luis de Valdivia.

Ecoener obtained revenues of €42.1 million in the first half of 2025, a 3% increase over the same period in 2024.

Gross operating profit (EBITDA) increased by 6% to €19.6 million, with stable margins. The photovoltaic business contributed most to EBITDA with

€12.5 million, followed by wind power (€6.3 million) and hydroelectric power (€5.2 million).

The company obtained a consolidated net profit of €4.33 million compared to €4.65 million over the same period last year. This performance has been mainly affected by the negative impact of the exchange rate due to the appreciation of the euro against the dollar.

81% of the power generation revenue came from long-term power purchase agreements (PPAs) and the regulated market. Latin America continues to increase its share of the business, contributing €22.4 million in the first half of the year, which now represents 53% of the total.

Power generation grew by 8% to 406 GWh, largely due to the contribution of the Yolanda photovoltaic plant in Guatemala.

Advances in ESG

For the fourth consecutive year, TÜV SÜV has verified Ecoener's Sustainability Report for 2024, confirming its compliance with the Global Reporting Initiative's (GRI) international standards. In addition, scopes 1, 2, and 3 of the carbon footprint have been verified.

Ecoener's Green Finance Framework has been validated by Sustainalytics, which highlights the robustness, transparency and alignment of the financial framework with the Green Bond Principles 2021.

In the environmental field, one of the most significant milestones has been the first issuance of carbon credits certified by Gold Standard.

Following the success in the Dominican Republic, Ecoener is also implementing an agrivoltaics project in Guatemala and Colombia that combines photovoltaic power generation with traditional agriculture.

About Ecoener

Ecoener is a Spanish multinational specialising in renewable energy. With 37 years of experience, Ecoener develops projects that seek perfect environmental and social integration, as well as a positive impact on communities. From the industrial point of view, it controls all the stages of the business cycle, from promotion and design to construction and management of hydroelectric power plants, wind farms and solar photovoltaic plants, as well as storage projects. It is present in 12 countries in Europe and America through its projects in operation and under construction and its business development offices.
